

Dreher Breweries is a subsidiary of Asahi Europe & International, which is committed to quality assurance, food safety, environmental protection, energy management, occupational health and safety, and sustainable development.

General principles

- Brewing safe beer in a safe environment and safe working conditions, that meets consumer's expectations
- Compliance with legal regulations and other requirements
- Commitment to continuous improvement of management systems on risk-based approach: setting measurable goals, providing necessary information and resources, reducing risks and eliminating hazards, regularly evaluate performance and apply a process-based approach
- Ethical conduct, interactive and open communication, and consultation with external and internal stakeholders and food-chain actors
- Competent, aware and committed staff through regular education and training

Quality Assurance Principles

- Strict quality standards have been set for each phase of the production process, from raw material to finished product, and are constantly monitored; measures have been identified to address the discrepancies
- Evaluating and developing suppliers and partners for the quality and safety of the materials supplied
- Improve customer and consumer satisfaction by taking into the account their needs and opinions, and taking corrective action based on comments and complaints

Food Safety Principles

- We operate a surveillance system based on HACCP principles and risk assessment during production processes, paying special attention to the prevention of hazards and the definition and application of measures necessary in the event of non-compliance
- Maintaining good manufacturing and hygiene practices is of paramount importance to us assuring constant monitoring
- We ensure the traceability of our products, and we are prepared for any product recall
- We are committed to strengthening protection against food tampering and food fraud

Environmental and Energy Management Aspects

Our Environmental and Energy Management program aims to prevent pollution, reduce the company's environmental footprint, and continuously improve energy performance by:

- Reducing water, energy and greenhouse gas emissions by implementing appropriate process control and technology investments
- We take energy efficiency and environmental considerations into account when purchasing products and services
- We distribute our products in returnable and recyclable packaging
- We strive to completely eliminate landfill
- We continuously improve the environmental and energy awareness of our employees so that environmental protection and energy conservation are part of their daily lives

Safety aspects

- We have created a safe and healthy environment for workers, suppliers and visitors to prevent accidents and health hazards.
- We identify health and safety risks and take steps to reduce them through technical solutions, protective equipment and training.
- We assure employee representation in the committee for defining safety tasks and addressing non-conformities.
